

MyID Verify Integration Guide

Integrating with **MyID Verify (MyDigital ID Static E-Verification)** allows your system to verify a user's identity by comparing their submitted details (Name, IC Number, and Face Image) directly against the Jabatan Pendaftaran Negara (JPN) national database using facial recognition scoring.

Unlike Live E-Verification, Static E-Verification does not perform real-time liveness or anti-spoofing checks; it focuses on image comparison and hash matching against official records.

High-Level Integration Workflow

Key Technical Details

1. API Endpoint & Requirements

- **API URL:** [HOST]/ekyc/face-verify/face-scoring-from-id
- **HTTP Method:** POST
- **Content-Type:** multipart/form-data
- **Authentication:** Bearer [API_TOKEN]

2. Request Body Parameters

Parameter	Data Type	Required	Description
name	Text	Yes	Valid full name of the user as printed on their MyKad.
icNumber	Text	Yes	Valid IC Number (can be provided with or without hyphens).
imageFile	File	Yes	Clear face photo file (JPEG/PNG with datasize below 7mb) captured or uploaded during user registration.

API Response Examples

Match Successful Response (faceMatch: true)

```
{
  "status": "success",
  "code": "SUCCESS",
  "subcode": 0,
  "sessionId": "65a24536-20bf-4464-a6c8-2e6e6ed660b9",
  "data": {
    "faceMatch": true,
    "faceScore": 100.0
  },
  "meta": {
    "reqTs": 1751959401469,
    "respTs": 1751959402575,
    "reqId": "32718d42-89f9-45af-8cd2-1ae48635f6bb"
  },
  "hashData": "07A4D24E58DC490BDD932C0DB6D8B753988B1F13E0C7507..."
}
```

Match Failed Response (faceMatch: false)

```
{
  "status": "success",
  "code": "SUCCESS",
  "subcode": 0,
  "sessionId": "65a24536-20bf-4464-a6c8-2e6e6ed660b9",
  "data": {
    "faceMatch": false,
    "faceScore": 65.7
  },
  "meta": {
    "reqTs": 1751959401469,
    "respTs": 1751959402575,
    "reqId": "32718d42-89f9-45af-8cd2-1ae48635f6bb"
  }
}
```

Implementation Steps

1. **Obtain API Credentials:** Acquire your API host URL and Bearer Token from the MyDigital ID Partners Portal.
2. **User Input Collection:** Capture the user's Full Name, MyKad IC Number, and a clear face photo on your application frontend.
3. **Backend API Request:** Send a POST request from your backend server to the MyDigital ID API using multipart/form-data.
4. **Process Verification Result:**
 - Inspect data.faceMatch (true or false) and data.faceScore in the response.
 - If faceMatch is true, proceed with account creation or identity verification.
 - If faceMatch is false, flag the verification for manual review or prompt the user to re-capture their photo.
